

Hevi-Haul International, Ltd.

Poly Rollers

**SAVE
YOUR
FLOORS!**

For applications where floor protection is a factor, Hevi-Haul is proud to introduce a Hevi-Duty polyurethane roller able to withstand higher capacities – and at no higher cost than the polys we have been providing for years. The Hevi-Duty polys are completely interchangeable with the old polys, and will be used in production exclusively beginning January 1, 2001.

Actual poly skate capacities vary based on the skate model frame being used. The following chart compares capacities of the old to the new, and highlights the models which are affected by the change.

In ordering replacement poly rollers, it is important to remember that you will see no improvement in capacity unless your skate has ALL Hevi-Duty polys.

If you have any questions regarding how these Hevi-Duty poly rollers may affect your specific application, please call us at 1-800-558-0577.

	Skate Model	Steel Roller Capacity (In Tons)	Old Polys Capacity (In Tons)	New Hevi-Duty Polys Capacity (In Tons)
Standard Skates	JD-3	1.5	1.5	1.5
